# WORKBOOK TEMPLATE

**Project Name:** Village Problem Reporting System

## 1. Problem Statement

Villages face different problems every day such as damaged roads, street light problems, water supply problems, drainage issues, garbage accumulation, and other local problems. Villagers often do not have a proper system to report these problems to the concerned authorities.

Our Village Problem Reporting System aims to provide a digital platform where villagers can report their problems and authorities can view, manage, track, and resolve the reported problems. The system helps improve communication between villagers and authorities and makes the problem reporting process easier and more organized.

## 2. Why Does the Problem Exist?

- Lack Of Proper Reporting System – Villagers may not have an easy way to report local problems.
- Poor Communication – Problems may not reach the concerned authority properly.
- Manual Reporting – Traditional reporting may require visiting the concerned office.
- Lack Of Tracking – Villagers may not know the current status of their reported problem.
- Delayed Action – Reported problems may take a long time to be resolved.
- Lack Of Coordination – Villagers and authorities may not be properly connected.
- Lack Of Records – There may not be a proper record of reported and resolved problems.

## 3. Internal Stakeholders

- Village Problem Administrator – manages users, problem reports, status, and records.
- Village Authority/Staff – views reported problems and takes necessary action.
- Organization/Institute Management – manages the overall system.
- System Administrator/Developer – maintains the website and database.

## 4. External Stakeholders

- Villagers – report problems such as roads, water, drainage, garbage, and street lights.
- Village Authorities – receive and resolve reported problems.
- Government/Local Departments – handle problems related to different village services.
- Community Members – provide information and feedback about village problems.

## 5. Expected System Users

- Administrator – manages users, problem reports, status, and records.
- Villager/User – reports village problems with necessary details.
- Village Authority/Staff – views reported problems and updates their status.
- Department/Officer – handles problems related to their department.

## 6. Objectives of the Project

- Develop an online smart village problem reporting system.
- Allow villagers to report problems easily.
- Allow users to provide problem details, location, and photos.
- Connect villagers with concerned authorities.
- Manage and track reported problems efficiently.
- Provide the status of reported problems.
- Reduce delays in problem reporting and communication.
- Maintain accurate problem reporting and resolution records.

## 7. Expected Outputs

- Available village problem reports.
- Online problem reporting requests.
- Problem details with location and photo.
- Problem confirmation with Problem ID/Report ID.
- Problem status such as Pending, In Progress, and Resolved.
- User problem reporting history.
- Admin dashboard.
- Village problem records and reports.

## 8. Hands-on Activity

- Survey common problems faced by villagers.
- Identify different types of village problems.
- Collect details about village problems.
- Prepare a data-gathering table.
- Design website interface/wireframe.
- Create village problem reporting workflow.
- Identify stakeholders and expected system users.
- Design database tables for users, problems, locations, departments, and status.
- Develop a system workflow for village problem reporting and resolution.
